Charlotte, NC | 510-585-7136 | hmajeed04@gmail.com | linkedin.com/in/mohammed-majeed-40a661271 | github.com/mmajeed7864 | mmajeed7864.github.io | mmajeed7864.github.io/soclab

PROFESSIONAL SUMMARY

SOC analyst with 4+ years across IT support, network operations, and security monitoring. Work a Tier 1 alert queue at Bay Alarm using Splunk, Elastic, Wazuh, and Microsoft Defender for Endpoint: alert triage, phishing investigation, IOC enrichment, and incident escalation through ServiceNow and Jira. Built a public multi-VM SOC lab covering Splunk detection engineering mapped to MITRE ATT&CK, Active Directory attack investigation, AWS security monitoring, and high-volume triage across 11 published build logs. CompTIA CySA+, Security+, and Network+ certified; AWS Security Specialty in progress.

CERTIFICATIONS & EDUCATION

CompTIA: CySA+ | Security+ | Network+ (earned 2025) AWS Certified Security - Specialty: In progress
B.S. Cybersecurity & Information Assurance, Western Governors University: Expected Jan 2027

PROFESSIONAL EXPERIENCE

Bay Alarm Company | Charlotte, NC (Remote)

SOC Analyst | Apr 2024 - Present

- Monitor security telemetry across Splunk, Elastic, Wazuh, and Microsoft Defender for Endpoint, operating a Tier 1 alert queue to separate benign activity from threats requiring investigation.
- Investigate phishing and suspicious-email reports by analyzing headers, SPF/DKIM/DMARC, embedded URLs, indicators of compromise, user impact, and appropriate response actions.
- Enrich domains, IPs, and file hashes using VirusTotal, AbuseIPDB, and Shodan to validate findings and support closure or escalation decisions.
- Follow incident runbooks and SLAs; document investigation steps, evidence, severity reasoning, remediation guidance, and handoffs in ServiceNow and Jira.

Apple Inc. | Remote

Network & Infrastructure Support Analyst - IS&T HelpLine | Feb 2023 - Jan 2024

- Investigated TCP/IP, DNS, DHCP, and VPN anomalies across macOS and iOS endpoints and documented the incident lifecycle in ServiceNow.
- Supported Active Directory account access, flagged anomalous login behavior, and administered JAMF MDM for endpoint compliance.

TECHNICAL SKILLS

SIEM & Log Analysis: Splunk Enterprise (SPL), Elastic SIEM, Kibana, Wazuh XDR, Splunk Universal Forwarder, Windows Event Log, Sysmon, Linux, DNS, and IDS analysis

EDR & Endpoint: Microsoft Defender for Endpoint, Wazuh XDR, Sysmon, Suricata IDS, Snort, FIM, parent-child process analysis

Detection & Frameworks: MITRE ATT&CK; mapping, Sigma rules, detection engineering, false-positive tuning, NIST and PICERL incident-response lifecycle

Threat Intel & Phishing: VirusTotal, AbuseIPDB, Shodan, URLScan.io, IOC enrichment, email headers, SPF/DKIM/DMARC, BEC triage

Identity & Cloud: Active Directory, Kerberos events 4768/4769/4771, group-change auditing, Group Policy, AWS CloudTrail, GuardDuty, Security Hub, IAM

OS & Scripting: Windows 10/11, Windows Server 2022, macOS, Linux (Ubuntu, Kali), PowerShell, Bash, Python basics, GitHub

Familiar / Developing: Microsoft Sentinel (KQL), CrowdStrike Falcon, SentinelOne, Splunk SOAR, Shuffle, TheHive, Zeek, Volatility, Nessus, Entra ID

HANDS-ON LABS & PROJECTS

Home SOC Lab - SIEM, EDR, Detection Engineering, and Active Directory | mmajeed7864.github.io/soclab

- Built and operate a multi-VM SOC lab with Elastic SIEM/Kibana and Fleet, Wazuh XDR, Splunk Enterprise and Universal Forwarders, Suricata IDS, Sysmon, and a Windows Server 2022 domain controller; published 11 build logs with troubleshooting evidence.
- Ran high-volume L1 triage from a scripted attack loop (50+ alerts per session and 30-second first-look decisions); produced SOC tickets, escalation summaries, shift handoffs, and five phishing investigations with an incident report.
- Built six enabled Splunk detections mapped to MITRE ATT&CK; and three Sigma-style rules; tuned a noisy outbound-connection rule from 38 benign matches to zero.
- Investigated five Active Directory scenarios: password spray (4771), AS-REP roastable configuration, Kerberoast-relevant 4769 requests, privileged group changes (4728/4729), and AD enumeration.
- Enabled AWS CloudTrail, GuardDuty, and Security Hub CIS controls; simulated IAM privilege escalation, traced findings to raw API events, and remediated permissive access.
- Deployed pfSense with tuned Snort rules and analyzed five malware PCAPs in Wireshark for C2, DNS tunneling, and exfiltration.
